# How to accept emergency drills on the web side (document)

After the emergency drill is executed, according to the approval process node, the drill is transferred to the personnel workbench with acceptance authority.

The user logs in to the OLISS web side and in the "Workbench → Emergency Drill - Accept" interface, you can operate according to the following steps 1-4:

Description:

If the acceptance is passed, the emergency drill will become "Finished" status.

If the acceptance is rejected, the emergency drill will be returned to the previous step (i.e., the execution phase), and the drill will be returned to the executor's workbench for resubmission for review (click on "Emergency Drill" under the waiting tasks on the workbench to view the drill returned by acceptance).
