

How to terminate a SMS operation item on the web side (Document)

The SMS operation task in the OLISS is generated according to the setting requirements of the SMS operation. If it is necessary to terminate the generation of a task, the operation item can be deleted or invalidated.

Note:

If the operation item is "**deleted**", all historical operation record data under the previous item will be deleted, and the operation task of the item will not appear again. Please operate with caution;

If the operation item is "**offed**", all historical data of the previous operation under this item will be saved, and the tasks that have not been operated and the tasks after the disabled action will not appear again;

Refer to the following steps:

In the interface of "SMS Management→Operation Record→SMS Task Setting", you can quickly find the target item through the filter conditions, and click to view the details of the target item. If you click "**Delete**", you will not see the accepted records; if you click "**Off**", you can only see the historical records.

The screenshot shows the 'SMS Task Setting' interface. On the left sidebar, 'SMS Management' is expanded, and 'SMS Task Setting' is selected. The main area displays a table of SMS tasks. Red annotations with arrows point to specific elements: 1. 'Click in order to enter the SMS Task Setting interface' points to the 'SMS Task Setting' menu item. 2. 'Users can quickly find the target item through the filter conditions' points to the search bar at the top. 3. 'Click to view the details of the target item' points to the 'Edit' button in the 'Operation' column. 4. 'If you click "Delete", you will not see the accepted records; if you click "Off", you can only see the historical records' points to the 'Delete' and 'Off' buttons in the 'Operation' column.

After the SMS task is offed, subsequent tasks will not be generated

If you need to restore the "offed" operation item, you can follow the following steps:
Switch to the "SMS Task Setting" interface, select the status of "Invalid", and click the "On" on the right side of the target item to be restored.

SMS Task **SMS Task Setting** → 1.Switch to the "SMS Task Setting" interface

Add Import Export Set Expiration Date Copy Vessel Invalid → 2.Select the status of "Invalid" Associated SMS Files Execution Method Keywords Searching Search Reset
