

# How to finish or cancel repair plans in advance on the web side (Document)

After the repair application is approved, it will automatically become a repair plan (the document enters the "repair plan" interface).

The user logs in to the OLISS web side, clicks "Repair Management→Repair Plan" in order to enter the repair plan interface. When there are many documents, the target document can be quickly found through the filter column or keyword, and then click "Finish" or "Cancel" on the right side of the target document according to the actual needs.

Users can also click on the "Repair Plan" under the waiting task on the workbench to enter the repair plan interface, as shown in the following figure:
