

2. Execution of Maintenance Tasks on the Web Platform

Log in to the website of OLISS, enter the workbench interface by default, and click "Waiting Task \rightarrow Maintenance Order", Filter the target maintenance items by conditions, click the "Execute" button behind the maintenance task, fill in the relevant maintenance information as required, and then click "Submit". Alternatively, depending on actual needs, it can be transferred for repair processing (provided that there are repair records), and then click "Submit" (after being transferred for repair processing, the maintenance task will change to the status of "Under Acceptance").
