What is Inquiry to Recommend Suppliers on the web side How to operate (Documentation)

When a user logs in to the OLISS Web side and modifies/improves the enquiry list interface (Step 1), and clicks "Add Suppliers" (Step 2), there are three types of supplier sources here.

1. Address book, which is the supplier information created by users in the "Address Book – Ship Supplier – Address Book" interface;

2. Shared resources for high-quality suppliers who have been certified by the system (Huhaiyi Supplier Management System);

3. Recommended suppliers, automatically matched for suppliers who have already maintained the supply type, sourced from address book and shared resources (the "Recommended Supplier" column will not appear when there is no supplier type that matches the purchased item).

When the purchased items have matching suppliers (with specific supply types configured) and these suppliers are high-quality suppliers certified by the Huhaiyi system, the system interface will display the "Inquiry to Recommend Suppliers" box (Step 3).

After checking the "One-click Check" box, click "Next Step" (Step 4) to return to the page of completing the enquiry list. The suppliers added from "Recommended Suppliers" or "Address Book" are displayed normally. After clicking "Inquiry" (Step 6), you can inquire from the selected suppliers and the selected matching suppliers in the shared resources.
